CloudCitadel

OBJECT STORAGE FOR BACKUP

Your backups, off site, in a few minutes.

Running out of room for backups? Point your backup software at CloudCitadel and keep as much as you need in IBM Cloud, with no hardware to buy.

What it is

An S3-compatible storage target for the backup tools you already use, running on IBM Cloud Object Storage. Your software writes its backups there and restores from there; CloudCitadel takes care of the storage. Turn on immutability and, for the period you set, nobody can change, overwrite or delete those backups, which also answers regulations that call for WORM storage.

Why teams pick it

- One clear portal for accounts, buckets and keys.
- Up and running in about two minutes.
- No new backup tool: anything that speaks S3 works.
- A bill you can predict: storage used, nothing else.

What comes with it

- IBM Cloud locations in Europe, the Americas and Asia Pacific.
- Backups kept apart from your systems, protected from insiders.
- No ceiling on capacity, and immutability at no extra cost.
- Restores of single files or whole applications, straight away.

Where it fits

Cloud to cloud

Workloads already in the cloud get their backup copy in a different cloud, away from the original.

On-premises to cloud

Servers in your own building get the off-site copy every backup plan needs, ready to restore.

One price: the terabytes you use

Storage is measured every day in whole terabytes and invoiced once a month, with 1 TB as the minimum per storage account. Uploading, downloading and setting up cost nothing.

2.9 TB	1.4 TB	0.9 TB
billed as 3 TB	billed as 2 TB	billed as 1 TB

Try it free for 30 days, with up to 5 TB of storage. Ask for your trial at info@cloudcitadel.eu or on cloudcitadel.eu.
